BODYGUARD IN A BOTTLE

Oil is the lifeblood of your engine. It not only lubricates the moving parts, but also cools, cleans and flushes away all the byproducts of combustion. It lives in an environment filled with heat, friction and toxins that are determined to break it down and shorten its useful life. And it keeps the heart of your motorcycle beating at idle or at full throttle. Harley-Davidson's complete line of lubricants are formulated specifically to keep your motorcycle running strong, mile after mile.

ENGINE OIL FAQ

What's in a bottle of oil?

- The Base Stock makes up 75-80% of a bottle of oil. Generally, if it comes from the ground, it is a Mineral Oil. And if it is made in a lab or a reactor, it is Synthetic Oil.
- The Additive Pack makes up the remaining 20-25%. These are the ingredients that make oil smarter and tailored to its application. The additives include:
 - Viscosity Modifiers – lets oil flow like 20 weight oil at start-up and 50 weight oil at operating temperatures
 - Detergents – cleans inside your engine
 - Dispersants – suspends contaminants in the oil so they can be carried to the filter
 - Buffers – neutralizes acids that form in your engine
 - Anti-oxidants – prevents sludge and oil thickening oxidation
 - Corrosion inhibitors – protects internal components from corroding
 - Anti-wear additives – provides protection against internal wear

How often should I change my motorcycle engine oil?

You should change your motorcycle engine oil and engine oil filter at the first 1,000-mile service interval and at every 5,000-mile service interval thereafter. If you ride your motorcycle hard, under dusty conditions or in cold weather, the engine oil and filter should be changed more often. You should always change your engine oil and filter prior to winter storage (or any extended storage) so that your engine oil is clean and free of contaminants during this time period.

What viscosity grade should I use in my Harley® Motorcycle?

The recommended viscosity grade for all temperature conditions is SAE 20W50 Harley-Davidson® Motor Oil. The SAE 50 H-D® Motorcycle Oil is satisfactory in ambient temperatures of 60-80°F, and the SAE 60 H-D® Motorcycle Oil in ambient temperatures above 80°F. SAE 20W50 covers the broadest range of operating temperatures.

What's the difference between synthetic and petroleum-based lubricants?

Group I, II and III petroleum-based lubricants are derived from oil pumped from the ground. Group IV and V synthetic lubricants are chemically produced in a lab. Petroleum-based lubricants inherit physical components (including contaminants) of the source crude oil in the refining process, while synthetic lubricants are custom-formulated to have desired properties for specific purposes, meaning that engineers have complete control of the lubricant from start to finish – at the molecular level.

What's better in my bike – Petroleum or Synthetic?

Petroleum lubricants have been around for a long time, and are effective at lubricating in most conditions, but mineral oil can't compete with the purity of synthetic lubricants – especially in extreme conditions. Synthetic oil does a better job reducing wear and resisting breakdown under a wider range of operating temperatures.

What does SYN3® full Synthetic Motorcycle Lubricant do for my drivetrain?

SYN3® Full Synthetic Motorcycle Lubricant offers all the benefits of Genuine Harley-Davidson® Motorcycle Oil, and:

- Offers superior wear protection at higher temperatures
- Keeps engines, transmissions and primary chaincases cleaner
- Meets the anti-wear lubricity requirements of all transmission gears
- Lubricates all primary chaincase components
- Delivers smooth, sure clutch operation
- Provides long-term protection of all internal components
- Improves seal and gasket performance
- Offers superior performance in high-output engines

What makes Harley® SYN3 better than other Synthetics for my Harley motorcycle?

- SYN3 is pure, genuine, full synthetic lubricant.
- SYN3 base stocks are synthesized materials – including Poly Alfa Olefin (PAO) and Esther, which are the most pure, highest quality synthetic base stocks available
 - SYN3 has the smartest, most robust additive package developed specifically to provide maximum performance and protection in H-D® powertrains

Beware, not all synthetics are created equal.

- Due to a legal loophole, other brands are selling Highly Refined Group III mineral oil as synthetic oil
 - Head to head, SYN3 outperforms these oils
- SYN3 is a product you can trust, from a brand you can trust. Oil is the lifeblood to your Harley-Davidson; don't take chances with anything else.

Why should I use H-D™ oil in my Harley?

- No one tests as much as we do – we test on the road, on dynos and in the laboratory
 - We accumulate millions of testing miles on our engines and drive trains, using only H-D Oil
 - We test in the harshest environments – testing is performed in the extreme heat of the desert
 - We test under the most rigorous duty cycles – accelerated durability testing helps explore the limits of our designs, in less time. This is a worst case scenario for oil
 - We run thousands of hours on dynos
 - We test in the laboratory – sampling and analyzing oil to determine its life and effectiveness during use
- H-D's additive package is the best available, it's the most robust, it was created exclusively for H-D powertrains and we are the only ones who have it.

A. REMOTE CONTROL GARAGE DOOR OPENER KIT

Operate your automatic garage door opener without leaving your motorcycle seat or fumbling in your pocket for the remote control. Compatible with most brands of automatic openers, this kit allows you to operate your door by cycling the bike's high-beam switch. The hidden transmitter splices into your bike's wiring harness and is powered by your vehicle battery, so there are no transmitter batteries to replace. When your key is switched off the transmitter is disabled, providing added garage security if you park your bike outside. The signal is sent to the in-garage receiver that plugs into a standard 110-volt outlet and is wired to the automatic opener. The receiver's rolling code technology provides additional security. Kit includes one transmitter and one receiver. Individual components are available to equip additional motorcycles and garages.

Spark Plugs

A. SCREAMIN' EAGLE® PERFORMANCE SPARK PLUGS

Screamin' Eagle® Spark Plugs feature double platinum coating for superior erosion resistance and extended life. The V trimmed ground electrode reduces shrouding of the flame front to promote flame propagation, and the fine wire center electrode enhances startups and ignitability. Screamin' Eagle Plugs feature Ribbed Core Technology (RCT) that provides resistance to fouling, and are designed with Original Equipment-style noise suppression to prevent electrical interference with radios and CB communication equipment. Works great in racing applications where rich air/fuel conditions are required. Unique style with Screamin' Eagle logo. Sold in pairs.

B. HARLEY-DAVIDSON® GOLD SPARK PLUGS

A special thread and shell coating ensures quick and easy removal from aluminum heads and resists corrosion. A gold palladium insert extends life and improves resistance to corrosion. The tapered tip provides better spark exposure to air/fuel mixture and allows the mixture to flow more easily through gap area for maximum combustibility. Fouling resistance is improved with smaller diameter center electrode wire and insulator tip. Plus, a copper-cored ground electrode runs cooler for extended life.

Tire Accessories

A. MOTORCYCLE TIRE PRESSURE MONITORING SYSTEM

Proper tire pressure is critical to the operation of your motorcycle. The Harley-Davidson® Tire Pressure Monitoring System (TPMS) takes the hassle out of monitoring your vehicle's front and rear tire pressure manually. The TPMS alerts the rider to low tire pressure as soon as the vehicle is started. While riding, receive low-pressure alerts via your H-D™ Speedo/Tach or via the H-D Connect™ mobile app.

42300124A

Fits '20-later Touring models (except Japan) equipped with Original Equipment or Accessory wheels that accept a TPMS sensor.

B. TIRE PRESSURE GAUGE AND FILL VALVE

Simplify checking the air pressure level and filling the tires on your motorcycle. This Tire Pressure Gauge features an 18 flexible hose and 2-way air chuck with both a 45° fill port and a unique side fill port that provides easy straight-in access to hard-to-reach motorcycle valve stems. The dual-range instant-read gauge measures pressures from 0-60 psi and 0-400 kPa, and is protected from impact and abrasion by a thick rubber collar. Designed to fit an air compressor with a standard 1/4 quick-disconnect coupler, this gauge allows you to check the pressure and fill the tire without removing the chuck from the tire. Just apply the chuck to the valve stem, read the pressure and add air by depressing the comfortable trigger lever. And for checking tire pressure on the road, you can use this tool like any standard tire gauge.

C. COMPACT AIR COMPRESSOR WITH LIGHT

Correct tire pressure is crucial to safe operation and long tire life, but checking the pressure, finding a gas station with a working air pump and filling the tire is a chore that many of us ignore. The Compact Air Compressor is designed to simplify this necessary procedure. The compact, lightweight 12V pump is designed for life on the road. The all-in-one pump plugs into your bike's battery charging harness, and features a built-in 0-160 psi pressure gauge and bright LED work light. The 11 air hose and 6' fuse-protected power cord easily reach the front and rear wheels, and are stored in convenient compartments when not in use. The lightweight pump features durable, impact-resistant construction, and is small enough to fit easily in a saddlebag or strap-on luggage. Kit includes pump, valve stem extension and nylon carrying bag.

D. VALVE STEM EXTENSION

Sometimes there's just not enough space around the tire's valve stem for the gas station air chuck and hose to reach. Brake rotors, sprockets and saddlebags get in the way and keep the air chuck from making an airtight seal. When that happens, this Valve Stem Extension provides easy access. Simply screw the extension in place on the stem, fill the tire to the proper pressure, remove the extension and replace the valve stem cap. Then toss the extension in your saddlebag or tool roll for the next time.

E. COMPACT TIRE GAUGE AND TREAD DEPTH INDICATOR

Combination dial air pressure and tread depth gauge provides easy access to the valve stem. A durable internal diaphragm provides accurate air pressure readings with a dual range indicator for 0-60 psi and 0-400 kPa readings. The pressure relief valve is activated by a push button to eliminate inner gauge air pressure after use. The integrated tire tread depth gauge features a dual-range color-coded indicator, calibrated in 1/32 (0-14/32) and millimeters (0-11mm), for monitoring tread wear. A protective rubber boot covers the housing to protect the gauge from impact and abrasion.

F. DIGITAL TIRE PRESSURE GAUGE

Back-lit Digital Tire Pressure Gauge is easy to read at any time of day. Providing accurate pressure readings in 0.50 psi increments up to 60 psi. Scale can be changed to read psi, bar, Kg or kPa pressure with the touch of a button. This versatile gauge features a 12 braided line and 90 degree angle chuck for easy access to valve stems, and a tough rubber jacket to protect the gauge from damage. Batteries are included.

75158-10

G. TIRE GAUGE AND TREAD DEPTH INDICATOR WITH EMBOSSED LEATHER POUCH

Chrome-plated steel gauge housing with Harley-Davidson script and 90 degree air chuck. Dual range indicator for air pressure and tire tread depth readings. Calibrated for 10-50 psi and 0-32/32 tread depth readings. Rotate the indicator shaft 90 degrees in the housing for 70-345 kPa and 0-30mm tread depth readings. Complete with a Bar & Shield logo embossed leather pouch.
