## A. WIND SPLITTER VENTED WINDSHIELD

Reduce helmet buffeting at speed. The Harley-Davidson® Detachables™ Wind Splitter Vented Windshield features an exclusive fingertip-adjustable center vent that reduces turbulence behind the windscreen. When open, the controlled airflow fills the negative pressure area behind the shield and helps to smooth the flow of air over the top of the screen and around the rider. The revised flow reduces helmet bobbing and neck fatigue so you can comfortably spend more time in the saddle. The open vent also provides cooling airflow to the rider at low speeds and in city traffic.

Engineered to provide the riding comfort of a larger windshield, this low-profile screen's contemporary contour sets it apart from the crowd. The shape keeps the windshield below your sight line so you don't look through bugs and road grime and the detachable design means you can ride without the shield when the mood strikes. The shield is formed of hard-coated polycarbonate for strength and scratch resistance and the dark-smoked finish reduces glare. The slim polished stainless steel brackets mount to the Original Equipment rubber isolated docking points for ease of installation and removal.

Rider Comfort

## A. COOLFLOW™ FAN

Unlike traditional fan kits that try to cool the engine by blowing air across the cylinders and often onto your legs, the CoolFlow™ Fan Kit keeps the riders comfortable by pulling air away from the rear cylinder and exhaust pipe, and directing it toward the ground.

The CoolFlow Fan features switched On/Off/Auto operation on '17-later models and On/Off on '09-'16 models. In the "ON" mode, the fan is active at low speeds, and will turn off when the bike reaches 40mph. As speed drops, the fan turns back on at 35 mph. This logic program prevents the fan from cycling on and off during low speed changes. On '17-later models, the AUTO setting operates based on a combination of speed parameters and specific engine and ambient temperatures. Built to withstand the harsh motorcycle environment, the all-weather CoolFlow Fan is 100% waterproof and includes everything you need for installation. The plug-and-play design is integrated with the vehicle electronics, so "On/Off/Auto" fan operation is indicated in the odometer screen. Your dealer will enable this function in the Electronic Control Module (ECM) and you're ready to roll. Odometer fan status display feature availability varies by model and may not be available for your vehicle.

## COMFORT IS KING

The ability to spend hours behind the handlebars and rack up hundreds of miles without stopping is dictated by how you feel on your bike. The shape of the seat, the reach to the handlebars and the location of your feet are all major factors in how far you can travel in a day. But don't forget your passenger's needs — he or she has a stake in this ride as well.

### THE RIDER & PASSENGER ENVIRONMENT

Accessories that impact the rider and passenger's physical contact with the motorcycle and the management of wind, temperature and road conditions should be your first consideration in building the ultimate touring machine.

## ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Standard Foot Controls and lowered suspension height.

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Extended Foot Controls.

### ESTABLISH YOUR POSITION AND FEEL

#### SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

SEE PAGES 150-164

#### HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

SEE PAGES 420-441

#### FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SEE PAGES 192-199

#### SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

Seating – Reach®

## REACH® SEATS

Designed to position riders with a shorter inseam closer to the ground, Reach® Seats are shaped to place the rider in a comfortable and confident relationship to the hand and foot controls. The wide seating surface provides loads of support while riding and the narrow tapered nose brings your legs together for an easier reach to the ground at a stop. Reach Seats feature a stepped profile that provides back support and keeps the rider from sliding back during acceleration.

### A. SUPER REACH SEAT

Get a little bit closer. Super Reach forward position seats are designed to move riders with a shorter inseam even closer to the controls and to bring the legs about 1.0" closer together so that your feet rest firmly on the pavement. The scooped bucket-shape saddle is enhanced with added back support padding to move the rider lower and forward.\* The combination positions the rider closer to the hand and foot controls to offer both comfort and confidence. Seat can be equipped with optional rider backrest for added support and comfort.

\*Measurements based on Original Equipment Electra Glide® seat:

'09 models – 2.0" lower, 2.5" forward

### B. REACH SOLO SEAT

From the custom metal Bar & Shield medallion to the sleek fast-back design, this seat is shaped to deliver the ergonomic position that a shorter rider needs. Sculpted and molded to ease the reach to the ground, this Reach Solo seat places the rider 3/8" lower and 1-1/4" forward when compared to the stock FLHX seat\*. The narrow nose and the low overall height provides the rider with added confidence and control while the bike is at a stop or during parking maneuvers, while the generous seating width adds support for the long haul. And the seat's upturned tail moves you closer to the controls without confining you to one position. For maximum comfort and support, this seat is recommended for smaller-framed riders between 5'-2" and 5'-8" tall.

\*Measurement as compared to other seating options:

– Original Equipment 2016 Electra Glide model seat – 1.25" lower, 0.8" forward

## TALLBOY® SEATS

The correct riding position can help a tall rider sit comfortably on the bike and avoid leg cramps and back strain during a long day in the saddle. For riders with a longer inseam, a Tallboy® Seat will put you on the road to fatigue-free riding. Designed to move the rider up and back from the stock seating position, a Tallboy Seat can eliminate the knees-high riding position and effectively places the body for a natural arm and leg reach to the controls. Tallboy Seats feature a bucket-shaped design for added support and a wide seating surface to reduce pressure on the tailbone.

### D. TALLBOY SEAT – '14-'25 MODELS

This Tallboy Seat moves the rider back 1.5"\* to provide much-needed arm and leg room for the long-limbed rider. The seat is sculpted to provide superior support and comfort, with a slight bucket shape to provide room to vary your riding position fore and aft. Passenger comfort will be maximized with the Tour-Pak® Luggage mounted in the rear most position. Tallboy seats can be equipped with an optional rider backrest (except Adjustable Style) for additional touring comfort.

## ROAD ZEPPELIN® AIR ADJUSTABLE SEATS

The open road. That's where we developed and tested the revolutionary comfort of the Road Zeppelin® Seat. This remarkable seat removes pressure points and hot spots by adjusting the amount of air contained in each bladder within the seat. Easy-to-reach rocker switches on the side of the seat control the built-in compressor, adding and bleeding off air with the quick push of a button to help relieve stress from the lower back, tail-bone or lower extremities. On a long run, occasionally inflating and deflating the air bladders reduces the "numb butt" effect by improving the blood flow to the extremities. So grab a seat. And enjoy the ride.

### A. ROAD ZEPPELIN AIR ADJUSTABLE SEAT

The Road Zeppelin seat's ergonomically friendly design combines a narrow front nose for ease of touching the ground at a stop with a wide seating surface for long-range rider and passenger comfort. The easy-to-clean vinyl seat is finished with an embroidered Road Zeppelin logo that lets everyone see that you take riding comfort seriously. The slotted seat accepts an optional rider backrest or passenger grab rail for additional touring comfort.

### B. HARLEY® HAMMOCK TOURING SEATS

Stay in the saddle all day. These Harley® Hammock Seats feature broad seating surfaces and a shallow bucket shape to distribute the weight and reduce pressure points. Beneath the 2" of traditional dual-density foam, the rider's weight is supported by a revolutionary fabric suspension system. The sling-like suspension system is integrated into the seat and acts like a hammock, providing 2" of suspension above the seat pan. This internal system prevents bottoming out and provides a 30% improvement in comfort and endurance over the long haul by sheltering the rider from pothole and highway expansion joint impacts. The generous seat length permits freedom of movement on long rides, making this seat a perfect option for taller riders.

Seating – Low Profile

## LOW-PROFILE SOLO TOURING SEATS AND PILLIONS

Set your custom bagger apart with a Low-Profile Solo Seat that combines street-rod style with a surprising touch of comfort. Start with a shape that distributes your weight across a wide surface area to reduce pressure points. Then, add a tapered nose that brings the legs closer together to shorten the reach to the ground. The result is the slammed custom seat that you crave, with enough comfort and support to let you actually spend time in the saddle. Finish the look with your choice of matching passenger pillion, sissy bar pad and Tour-Pak® carrier backrest pad.

### A. LOW-PROFILE SOLO TOURING SEAT – SMOOTH VINYL

Suspension

### PREMIUM ADJUSTABLE PERFORMANCE SUSPENSION

Step up to the ultimate in handling and ride quality. Screamin' Eagle®/Öhlins® Remote Reservoir Rear Shocks for Harley-Davidson® Touring models were designed for Screamin' Eagle® Factory Team race bikes and it's what the Wymans had on their Road Glide® Special motorcycles. Fully adjustable for preload and compression/rebound damping, with a remote reservoir for optimal performance and style. Use these shocks to dial in your ideal combination of handling and ride, for the street or the track. Ride like a winner.

#### 1 COMPRESSION ADJUSTER

Fine-tunes suspension to control the upward wheel movement when hitting a bump

Adjusts the speed at which the suspension compresses

Critical for balancing ride quality and suspension bottoming

#### 4 REMOTE RESERVOIR

Remote reservoir keeps the shock oil cooler to maintain damping performance

Internal bladder separates the oil from the nitrogen gas to reduce cavitation during aggressive riding

#### 2 REBOUND ADJUSTER

Fine-tunes the downward wheel movement after riding over bumps or potholes

Adjusts the speed at which the suspension returns from extension

Critical for balancing ride quality and suspension bounce

#### 3 PRELOAD ADJUSTER

Critical to setting the proper suspension travel to soak up large potholes and absorb large bumps

Adjusts for rider sag—the amount the suspension drops under the weight of the rider and cargo

#### 5 LENGTH

The shock length is adjustable from +8mm or -2mm over the standard height.

Paint Protection

### TRANSPARENT PAINT GUARD KITS

This transparent skin is designed to protect your paint from bugs, boot scuffs and road debris. The crystal-clear material protects the paint without changing the overall look of your bike. And the optical properties of the material disguise minor scuffs and scratches. The application process is similar to that of tinted window film and the material can be removed and replaced when it is no longer cosmetically appealing. Scratches to paint can be expensive to repair but scratches to this film can be removed by applying a small amount of heat with a heat gun.

### F. TRANSPARENT PAINT GUARD KIT – TRIKE

The crystal-clear material protects the area surrounding the passenger footboard and is pre-cut to fit the leading and inner surface of the rear fender, the fascia panel of the trunk and the side covers. Scratches in the material can be "healed" by applying a small amount of heat with a heat gun. The application process is similar to that of tinted window film and the material can be removed and replaced when it is no longer cosmetically appealing.
